## How to Solve Sudoku Puzzles

To solve a standard Sudoku puzzle, place a number into each box so that each row across, each column down, and each small 9-box square within the larger diagram (there are 9 of these) will contain every number from 1 through 9. In other words, no number will appear more than once in any row, column, or smaller 9-box square. Working with the numbers already given as a guide, complete each diagram with the missing numbers that will lead to the correct solution.

**Extreme Sudoku:** Follow the same rules as for a standard Sudoku; however, in these puzzles, each of the two long diagonals (which are shaded) must also contain every number from 1 through 9.
