How to Solve Sudoku Puzzles

To solve a Sudoku puzzle, place a number into each box so that each row across, each column down, and each small 9-box square within the larger diagram (there are 9 of these) will contain every number from 1 through 9. In other words, no number will appear more than once in any row, column, or smaller 9-box square. Working with the numbers already given as a guide, complete each diagram with the missing numbers that will lead to the correct solution.
